

Requirements

LivEPICS is not pretentious, nevertheless it requires some minimal hardware to run properly. It depends on what do you wish to use LivEPICS for, of course. The most important thing is memory. More detailed description follows:

Medium

either IDE connected CDROM (to boot from the CD)
or USB FlashDisk (to boot from the mass storage device)
or maybe some harddisk (to boot LivEPICS from the disk)

BIOS

either non-emulation booting enabled (to boot from the CD)
or USB FlashDrive booting enabled (to boot from the mass storage device)

Memory

96 MB to run without Xwindow
144 MB to run Xwindow with KDE

Processor

i486 or better, Pentium or AMD are both OK.

Peripheral devices

some keyboard
PS/2 or USB connected mouse (required for Xwindow only)

Harddisk

No harddisk is required
