**Fedora Core 5 LiveCD w EPICS**

**How to configure network**

LivEPICS uses DHCP to autoconfigure your network card's IP address, route tables and nameservers. If you are on the network with DHCP server then you shouldn't have any problem. Just boot LivEPICS and everything will work. If you have a fixed IP, use the regular **system-config-network**

**Can I remove the live CD while it is running?**

- \* option 6 copy ISO image to RAM & run /var from RAM (requires 1 GByte of RAM)
- \* option 7 run ISO from hard disk & run /var from RAM (copy adios-version.iso to hard disk first)
- \* option 27 run ISO from hard disk & run /var from FAT/EXT disk

**How do I set the display resolution?**

- \* option d set display resolution (default 1024x768)

**How can I save my files to floppy or USB device ?**

- \* boot option 11 to save changes to savesate.tgz on floppy diskette
- \* boot option 3 to save changes to savestate.tgz on USB device
- \* boot option x to remove previous X and Hardware configuration

**Where is all the EPICS stuff ?**

- \* /usr/epics

**Where are the EPICS docs ?**

- \* Please use Firefox, there is a Personal ToolBar Folder with all bookmarks and pointers to offline docs.
