### LivePICS fc5 description

**LivePICS is a Linux Live CD that includes: Epics base, Extensions tools, introductory documents and manuals.**

LivePICS is a Linux live CD that includes: Epics Base (release R3.14.7), Extensions tools, introductory documents and manuals. It has the complete functionality to develop a small control system, but it is mainly intended for training classes or to monitor and supervise an EPICS network.

**The goal of LivePICS is:**

- Allows to use EPICS without installation on the hard disk.
- Automatic setup of environment variables to compile and test new applications from scratch.
- Includes the basic tools (MEDM, VDCT, etc.) with the related documentation.

**What's New** in This Release:

- It has a NAGIOS server set-up ready to use, to monitor the simple example EPICS application.
- A "coffee" application is present, into the adios home directory, that could control a parallel port.
