

L.N.L. – I.N.F.N. (REP) 145/99

PROJECT STUDY

OF AN ADVANCED FACILITY
FOR EXOTIC BEAMS AT LNL

June 1999

Index

ABSTRACT, INTRODUCTION AND OUTLINE	7
1 THE FACILITY CONCEPT	15
1.1 Methods of Production	15
1.2 ISOL-Type Radioactive Ion Beam Facilities	16
1.3 The Accelerators	17
<i>References</i>	17
<i>Figures</i>	18
2 RIB PHYSICS	21
2.1 Justification	21
2.2 Properties that Needs to be Measured	21
2.2.1 Ground state properties	21
Nuclear masses	
Radii	
Moments	
2.2.2 Spectroscopy	22
Gamma spectroscopy	
Beta spectroscopy	
2.2.3 Reactions	24
Coulomb excitation and inelastic reactions	
One- and two-nucleon transfer reactions	
Fusion	
2.3 Nuclear Astrophysics	26
2.3.1 Element production	26
2.3.2 Other astrophysical problems	26
Neutron stars: cooling	
Neutron stars: phase transitions	
Supernova explosions	
Measure of the asymmetry energy	
<i>References</i>	28
<i>Figures</i>	29

3	INSTRUMENTATION AND TECHNIQUES	33
3.1	Relevant Set-Ups at LNL	33
3.2	RIB with Ion and Atomic Traps	36
3.2.1	Introduction	36
3.2.2	Nuclear Physics Experiments with Traps	36
	Nuclear masses	
	Nuclear moments	
	Nuclear decays	
3.2.3	RIB studies with a TANDEM-LINAC accelerator complex	37
	Fundamental interactions	
	Measurements with MOT	
	Ion traps coupled to a gas-filled separator	
	Appendix: Acceleration of Radio-Isotopes with the TANDEM-ALPI Accelerator Complex at the LNL	39
	<i>References</i>	41
	<i>Figures</i>	42
4	APPLICATIONS TO OTHER FIELDS	47
4.1	Experimental facility for the Skin Melanoma Treatment with BNCT	47
4.1.1	Introduction	47
4.1.2	The skin melanoma	47
4.1.3	The experimental facility	48
4.1.4	Dosimetry and Microdosimetry	48
4.1.5	Radiobiology	49
4.2	Medical Radioisotopes	49
4.3	Material Science Experiments	51
4.3.1	Surface and interface studies	51
4.3.2	Investigations of impurities and defects in II-VI semiconductors	51
4.3.3	Annealing behavior of radiation damage in III-V semiconductors	52
4.3.4	Hydrogen passivation and diffusion in III-V semiconductors	52
4.4	Physics of Neutrons	52
	<i>References</i>	53
	<i>Figures</i>	55

5	THE PRIMARY ACCELERATOR	57
5.1	LINAC Architecture	57
5.2	The RFQ	57
5.3	The ISCL	58
	<i>References</i>	60
	<i>Figures</i>	61
6	PRODUCTION TARGETS AND ION SOURCES	65
6.1	Production Target	65
6.2	The Target Technology	65
6.3	The Ion Source	66
6.4	Development on Ion Sources	67
	<i>References</i>	68
7	ISOBARIC SEPARATORS FOR RADIOACTIVE BEAM FACILITIES	71
	<i>References</i>	72
	<i>Figures</i>	73
8	THE SECONDARY-BEAM ACCELERATOR	75
	<i>References</i>	77
	<i>Figures</i>	78
9	SECONDARY BEAM INTENSITIES	79
9.1	Production of Neutron-Rich Isotopes	79
9.2	Evaluation of Secondary Beam Intensities	79
	<i>References</i>	80
	<i>Figures</i>	81
10	RADIOACTIVITY, WASTE TREATMENT, SHIELDING	83
10.1	The High Current 100 MeV/u primary Proton/Deuteron Beam	83
10.2	The Cave and the extraction System	84
10.3	The transportation of the Radioactive Beams	84
	<i>References</i>	84
11	THE ALPI POST-ACCELERATOR AND THE EXPERIMENTAL AREAS	87
	<i>References</i>	88
	<i>Figures</i>	89

12	SPES AS A SPECIALIZED NATIONAL ISOL FACILITY AT LNL	91
12.1	Neutron Production Rates and the Secondary Beam Intensities	91
12.2	R&D for the SPES program	93
12.2.1	The main accelerator	93
12.2.2	Stopping target for neutron production	93
12.2.3	Target/ion source for radionuclides production	94
12.2.4	Production of multiple charged ions	94
	<i>References</i>	95
	<i>Figures</i>	96
13	COST ESTIMATE AND TIME SCHEDULE	105
13.1	Cost Estimate for the SPES Facility	105
13.2	Construction Time Schedule	107
	SPES Group	109
	Acknowledgments	110
